DIGITAL DEVELOPMENT PARTNERSHIP

THE WORLD BANK

KREN
Kosovo Research and Education Network

coursera

CERTIFICATE

CERTIFICATE OF COMPLETION

Awarded to:

Erza Duraku

has successfully completed the training program

Cloud Computing

Covering core concepts, practical applications, and real-world case studies in AWS, Git, Linux, DevOps, IaC, CI/CD and Agentic AI.

Date
30.06.2026

Charles Hurpy
Senior Digital Specialist
World Bank

Jon Krasniqi
Trainer

Collaboration in a productive environment

- Introduction to Agile Methodologies
- Scrum events, members and artifacts
- Performing our first Spring Planning, Review and Retrospective

Version Control

- Covering basic and advanced Git functionalities
- Git best practices
- Collaboration over GitHub

Linux

- Introduction to Linux and Shell
- Navigating the Linux filesystem, performing file operations and running common utilities for day-to-day activities
- Understanding I/O Redirection, File Descriptors and Process Management
- Utilizing VIM as a main text editor
- Conditionals, loops and bash scripting

Cloud Computing and DevOps

- Understanding the DevOps approach to engineering challenges
- Introduction to Cloud Types, Service Models and advantages of each cloud provider

Amazon Web Services Fundamentals

- Understanding the AWS Global Distribution, Regions, Availability Zones and Edge Locations
- Managing users, roles and policies in AWS Identity & Access Management (IAM)
- Implementing Cloud Security best practices in IAM - Zero Trust, MFA, Least Access Privilege
- AWS Well-Architected Framework and Shared Responsibility Model

Compute Services in AWS

- Elastic Compute Cloud (EC2) - Instance Types, Reservation Types and Components
- Building custom Amazon Machine Images (AMI)

Scaling in AWS

- Using Launch Templates and User Data for streamlined provisioning of EC2 instances
- Launching EC2 instances with Auto Scaling Groups (ASG) to allow scaling during busy periods
- Deploying Application Load Balancers (ALB) to enable automatic registration of EC2 instances to the service
- **Master Project:** Provisioning an AWS Infrastructure including VPC, Public and Private Subnets, Routing Table configuration, NAT and Internet Gateways, Security Groups, EC2's, Application Load Balancers and Auto Scaling Groups

Serverless in AWS

- Leveraging AWS Serverless building blocks like Lambda, S3 and DynamoDB
- **Master Project:** Creating and deploying a fully serverless application using API Gateway and Lambda for business logic, and S3 with CloudFront for static content serving

Infrastructure as Code

- Understanding Terraform fundamentals to manage production infrastructure as code
- Utilizing Terraform best practices like remote state locking, remote backends, credential masking and provider version locking
- Managing Version Controller infrastructure with Github and Terraform

CI/CD

- Understanding workflows, events, jobs, steps and reusable actions
- Integrating Terraform CI/CD with Github Actions

Agentic AI

- Benefits of utilizing Agentic and Generative AI to increase productivity
- Understanding core AI features like skills, agents, guardrails and proper planning
- Mast Project: Utilizing Agentic AI to plan and implement a complex AWS Infrastructure with Terraform and Github Actions
